Illustrative sample case study. Client name, figures and results are hypothetical and for portfolio demonstration only.

OVERVIEW

The brand, the problem and the goal

Client	Direct-to-consumer skincare brand (name withheld)	**Duration**	3 months
Platform	Meta Ads (Facebook + Instagram)	**Total ad spend**	₹3,00,000
Market	India, metro and Tier-1 cities	**Avg. order value**	₹1,250

₹10.6L
Revenue generated
from ₹3L ad spend

3.53x
Blended ROAS
up from 1.8x baseline

₹354
Cost per purchase
down from ₹620 baseline

+230%
Purchase volume
Month 3 vs Month 1

The challenge

The brand had a strong product but inconsistent paid performance. Before we started, campaigns were run as a single broad ad set with 2-3 static creatives, no structured testing and no separation between prospecting and retargeting. ROAS hovered near 1.8x and cost per purchase around ₹620, which was not sustainable at their margins.

Objectives

- Reach a **3x+ blended ROAS** within 90 days while scaling spend.
- Bring cost per purchase **below ₹400**.
- Build a repeatable creative-testing system the brand can keep using.

What was audited first

- Pixel and Conversions API setup (events were duplicated and under-reported).
- Audience overlap between campaigns causing internal auction competition.
- Creative fatigue: top ad had frequency above 4.5 with falling CTR.
- Landing page: slow mobile load and no social proof above the fold.

STRATEGY

A three-layer funnel built for testing

Instead of scaling a single campaign, the account was rebuilt around a funnel with clear roles for each layer and a weekly creative-testing cadence.

1. Prospecting (TOF)
- Broad + interest + 1-3% lookalikes
- Advantage+ shopping tested vs manual
- UGC, founder-story and problem-solution hooks
- ~60% of budget

2. Warm (MOF)
- Video viewers 50%+, IG engagers, site visitors 30d
- Testimonial and before/after content
- Product education carousels
- ~20% of budget

3. Retargeting (BOF)
- ATC + checkout abandoners, 7 and 14 day windows
- Offer-led creatives with urgency
- Dynamic catalog ads
- ~15% of budget

4. Testing sandbox
- Dedicated campaign for new creatives
- Winners promoted to scale campaigns
- Losers killed within 3-4 days
- ~5% of budget

Creative system

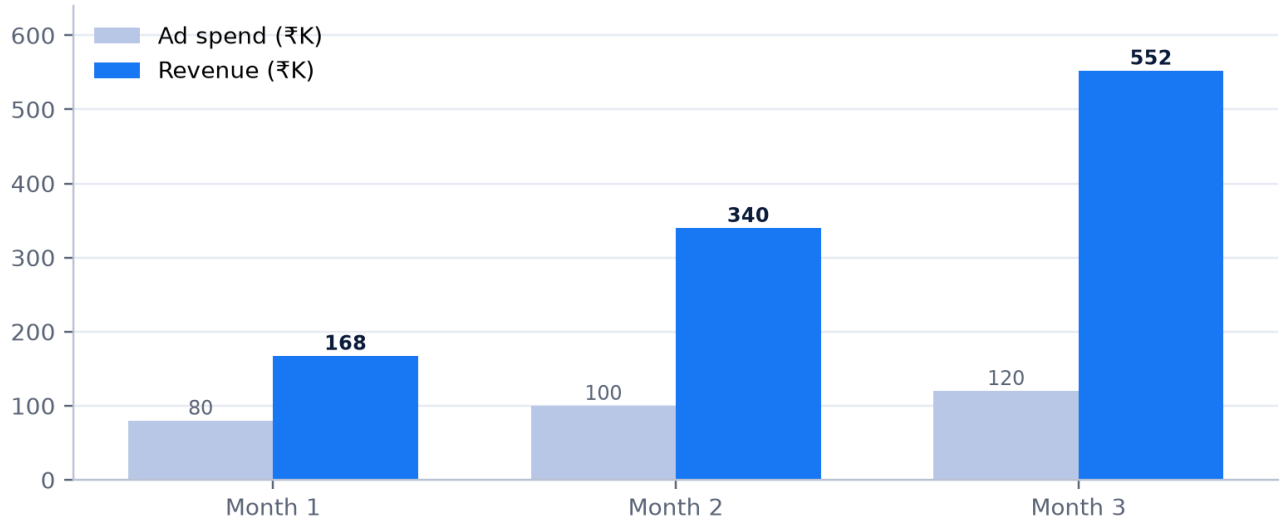

- **12 to 15 new creatives per month** across 4 angles: pain point, social proof, ingredient story, offer.
- Hook-first editing: the first 3 seconds tested separately (3-second view rate as the leading metric).
- Native-style UGC and creator-shot videos outperformed polished studio ads.
- Every ad logged in a testing sheet with hypothesis, result and learning.

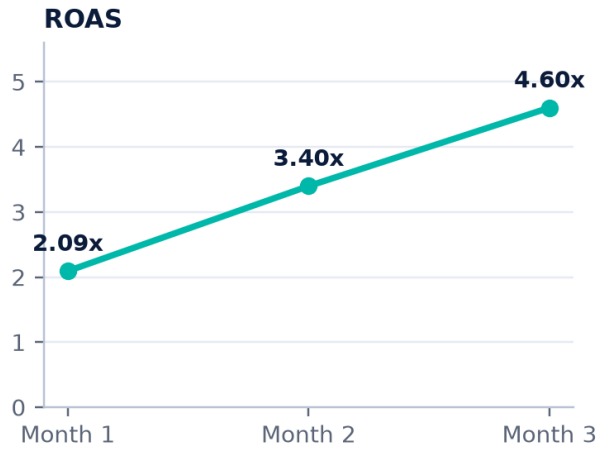

Optimisation rules

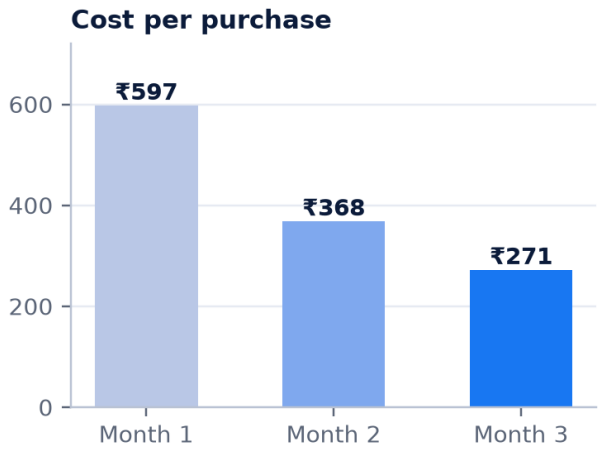

Signal	Action
CPA 20% below target for 3 days	Increase budget by 20% (never more than every 48h)
Frequency above 3 on prospecting	Refresh creatives, expand audience
Hook rate under 25%	Rework first 3 seconds, keep the body
Spend above 2x target CPA, no purchase	Pause the ad, log the learning

RESULTS

Performance across 90 days

Metric	Month 1	Month 2	Month 3	Total / Avg.
Ad spend	₹80,000	₹100,000	₹120,000	**₹300,000**
Purchases	134	272	442	**848**
Revenue	₹167,500	₹340,000	₹552,500	**₹1,060,000**
ROAS	2.09x	3.40x	4.60x	**3.53x**
Cost per purchase	₹597	₹368	₹271	**₹354**
CTR (link)	0.9%	1.4%	1.9%	**1.4%**

TAKEAWAYS

What worked and what we would do next

Key learnings

- **Creative was the biggest lever.** Three of the top five ads were creator-style UGC; cost per purchase on these was ~35% lower than studio ads.
- **Fixing tracking first** (Pixel + Conversions API) gave the algorithm cleaner signals and stabilised delivery within two weeks.
- **Slow, rule-based scaling** (20% steps) let spend grow 50% from Month 1 to Month 3 without ROAS collapsing.
- **Retargeting was efficient but capped** by traffic volume, so prospecting quality drove growth.

Recommended next steps

- Add email/WhatsApp flows to lift repeat purchase rate and LTV.
- Test bundles and subscription offers to raise AOV above ₹1,250.
- Expand into Tier-2 cities and a second product line with the same testing framework.
- Introduce creator whitelisting (partnership ads) for added social proof.
